

# Dorsal Anterior Midcingulate Cortex: Roles in Normal Cognition and Disruption in Attention-Deficit/Hyperactivity Disorder

George Bush

## Chapter contents

<b>Goals of This Chapter</b> 246	Difficulty Monitoring 256
<b>The Emergence of Cognitive Theories for “Limbic” Cortex</b> 247	Competition/Performance Monitoring 256
<b>Localizing daMCC and Clarifying Terminology</b> 248	Prediction Error/Error Likelihood 257
<b>Mechanistic Theories and Observations of daMCC Functions</b> 251	Autonomic Control 258
Monkey Electophysiology Studies 251	Feedback-Mediated Decision-Making 258
<b>Main Observations and Models of daMCC Functions</b> 254	Nociception/Pain 261
Emotion 254	<b>Dysfunction in daMCC in Attention-Deficit/Hyperactivity Disorder</b> 262
Error Detection 254	Evidence of daMCC dysfunction 262
Anticipation/Timing/Expectency 255	<b>Further Connections of Cingulate Research to ADHD</b> 265
Novelty Detection 255	<b>Neurobiological Views of daMCC and ADHD</b> 267
Selection for Action: Attention, Target Selection, and Response Selection 255	<b>Acknowledgements</b> 268
Working Memory 256	<b>References</b> 268
